

Fresh-NTM Veggie Bath!

Never before has there been anything like it.

Fresh-N Veggie Bath!TM does two things very well. First, as its name suggests, it *“cleans fruits and veggies down to their goodness”*.SM

Second, because of the effectiveness of the cleaning it performs, **Fresh-N Veggie Bath!**TM has been demonstrated to extend the freshness of fruits and vegetables for days and even weeks in some cases.

While other produce washing products have been available for some time, none has both the safety and the effectiveness of the **QuantumMaxxTM Nano Colloid Technology** that **Fresh-N Veggie Bath!**TM has. And none has

demonstrated the freshness-extending qualities of **Fresh-N Veggie Bath!**TM.

The exclusive formulation in the **Fresh-N Veggie Bath!**TM is derived 100% from *botanical* sources. Simply put, it is made *from* plants *for* plants! Talk about **GREEN**! It doesn't get any “greener” than that. Furthermore, the ingredients in the **Fresh-N Veggie Bath!**TM are **Certified 100% Carcinogen-Mutagen-Cytogen Free!** In other words, there is nothing in the product even mildly or remotely toxic. There are NO carcinogens – agents known to cause cancer, NO mutagens – agents that cause cell mutations, and NO cytogens – agents that cause birth defects. NONE. NADA. ZILCH. ABSOLUTELY ZERO.

But safety of the product itself is not the only consideration. Exclusive to **Fresh-N Veggie Bath!**TM is the ability of its all-naturally derived surfactants to penetrate and loosen the chemical bonds of organic contaminants – from the petroleum derived neurotoxic pesticides and herbicides from conventional growing methods to the collective filth and fecal material so often found on produce's surfaces, even if organically grown. Then it breaks those contaminants into extremely small particles, surrounds them in a submicroscopic cluster of singularly polarized water droplets, and allows them to be safely washed away where they can do no harm – to us, to the ground, or to our water supplies.

This amazing process works on the angstrom level, a level so small that the resulting encapsulating “mycelles”, with the contamination particles held safely inside and insulated from all other like contaminants, represent the tiniest particles known to science that still retain the characteristics of the original molecule. The only difference is that the particle in this

newly created cluster will never be able to bond together with another like particle in a similar cluster. At this size, naturally occurring bacteria or enzymes in the soil or water will quickly eat the offending particle and make it go away. GONE. VANISHED.

And with the undesirable surface-laden contaminants gone, **Fresh-N Veggie Bath!**TM lets the fruits and veggies you eat concentrate on important things. Like taste. And staying fresh. The very things you bought the produce for in the first place. And YOU can

concentrate on the things that matter most to you and your family. Like feeling safe, wholesome, and good about the food you bring into your home.

Available in convenient quart-sized ready-to-use (RTU) spray, economical ready-to-mix (RTM) concentrate (makes 32 quarts), or ready-to-mix SUPER concentrate (RTMSC) which makes 32 gallons. Gallon, drum, and tote sizes also available for commercial/institutional use.
